

DIGI-TRAX LABELS FOR CORD BLOOD PRODUCTS

It's a once in a lifetime process for parents to store their child's blood

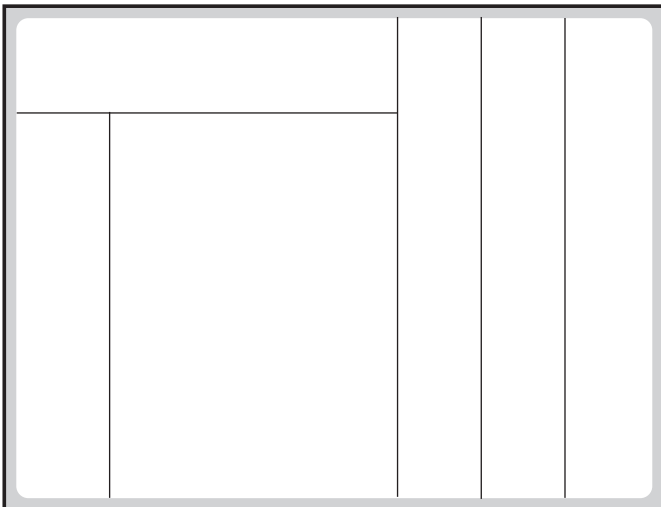

We understand how important it is to properly identify and manage the cord blood that you receive.

Digi-Trax® Corporation has been supplying blood banks, hospitals and healthcare facilities with durable, smudgeproof labels and labeling systems to properly identify cord blood unit bags and testing sections. Our labels withstand extreme temperatures, both high and low, even during a vapor phase and liquid nitrogen process. And we understand that these labels may need to be stored indefinitely so our R&D team does extensive testing to ensure the labels work in these environments.

TAKE A LOOK AT WHAT ONE CORD BANK FACILITY DOES:

LABEL SAMPLE BEFORE THE FACILITY PRINTS INFORMATION

LABEL SAMPLE AFTER IT'S PRINTED AND IN USE

The barcodes represent the client's ID number. Each label tubing section is heat sealed prior to cryostorage.

Digi-Trax® Corporation is a leading supplier of bar code & data capture hardware. We develop software and labeling solutions for healthcare, specifically designed for blood banks, transfusion services, pharmacies, patient identification, and laboratory information systems.

650 Heathrow Drive
Lincolnshire, Illinois 60069
