

# HemaTrax® FFP

## Print Your Own Fresh Frozen Plasma Labels

Need an easy-to-use, accurate system just for printing FFP labels (expiration date and time)? Take a look at this modified version of our successful HemaTrax® software which is installed in thousands of facilities. This system is modified to provide users with the ability to ONLY print the lower two quadrants after product modifications are made.

The HemaTrax® FFP only system lets you print either the lower left or right quadrants individually, using a 2" wide Zebra ZD-410 direct thermal printer. This feature eliminates the need to print two separate labels. You can print on-demand as needed, and only print what you need. The system includes the following:

- **HemaTrax® for FFP ONLY software**
- **1- Zebra ZD410 300dpi printer-2"**
- **1 roll of ISBT-22-DT-ZD direct thermal labels.**

If you only need to print the bottom two quadrants of the fresh frozen plasma face labels, this small printer option is quite economical, saves time and increases your productivity. And, no need to change messy ribbons within this direct thermal printer.
